

Grupo Televisa Statement on Water

This Statement defines the approach we adopt as a Company towards water. At Grupo Televisa, we acknowledge the importance of water for sustaining life on the planet, as well as the importance of preserving this valuable resource for present and future generations.

Our Environmental Management Policy has the objective of regulating activities carried out by Grupo Televisa in order to mitigate or compensate for its environmental impact. Environmental management is the set of actions the Company carries out in order to preserve water among other objectives. These actions are evaluated using national and international environmental standards.

Our actions are focused on managing two main important aspects of water such as quantity and quality. We monitor how much water we use to manage conservation actions effectively in the Company. Moreover, we aim to maintain a good quality of our discharge water through Wastewater Treatment Plants ("WWTP").

The processes used in the WWTP are ionic and biologic electro chlorination of wastewater. Some of the facilities that incorporate this technology are San Angel, Collection Center, Santa Fe, and Rojo Gomez. Treated water is mainly utilized in toilets, fire systems, and garden facilities irrigation.
